Introduction

This project is an Android application developed using Android Studio and Java. The application is designed to allow students to register for an orientation programme. Students need to enter their name, student ID, email, and gender. They can also select the number of sessions and choose additional activities such as Campus Tour, Leadership Workshop, and Team Building Activity.

The system will calculate the total registration fee based on the selected sessions and activities. After registration, the student information and total fee will be displayed on the second page. The application also provides a call button that allows users to contact the organiser. This project helps to make the registration process easier, faster, and more organised.

Conclusion

In conclusion, this Android application successfully provides a simple registration system for students. The application allows users to enter their information, select sessions and activities, and calculate the total fee automatically. The registered information is then displayed on the second page for the user to check.

This project also helps students understand how to use Java, Android Studio, Intent, Spinner, CheckBox, RadioButton, and Toast messages. Overall, the application makes the registration process simple, easy, and user-friendly.
