## **INTRODUCTION**

This project is an Android application developed using Android Studio and Java. The application is designed to collect and store visitor information such as visitor name, phone number, ticket type, visit time, and meal package selection. Users can select their ticket type using a Spinner, choose the preferred visit time using Radio Buttons, and select an additional meal package using a CheckBox.

The application also uses SharedPreferences to save the entered information locally on the device. Users can retrieve the saved information by clicking the display button. This project demonstrates the use of basic Android components, user input handling, event listeners, Spinner, RadioButton, CheckBox, Toast messages, and SharedPreferences in developing a simple Android application.

## MainActivity.java

```
package com.pmj.pw3_25dit24f1199;

import android.content.SharedPreferences;
import android.os.Bundle;
import android.view.Display;
import android.view.View;
import android.widget.AdapterView;
import android.widget.Button;
import android.widget.CheckBox;
import android.widget.EditText;
import android.widget.RadioButton;
import android.widget.Spinner;
import android.widget.TextView;
import android.widget.Toast;

import androidx.activity.EdgeToEdge;
import androidx.appcompat.app.AppCompatActivity;
import androidx.core.graphics.Insets;
import androidx.core.view.ViewCompat;
import androidx.core.view.WindowInsetsCompat;

public class MainActivity extends AppCompatActivity {

    String time = "";
    String meal = "";

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        EdgeToEdge.enable(this);
        setContentView(R.layout.activity_main);

        ViewCompat.setOnApplyWindowInsetsListener(findViewById(R.id.No
```

```

Phone2), (v, insets) -> {
    Insets systemBars =
insets.getInsets(WindowInsetsCompat.Type.systemBars());
    v.setPadding(systemBars.left, systemBars.top,
systemBars.right, systemBars.bottom);
    return insets;
});

Spinner spinnerSession =
findViewById(R.id.TicketType);
String[] sessions =
    {"CHILD", "ADULT", "SENIOR"};
ArrayAdapter<String> adapter = new ArrayAdapter<>
    (this,
android.R.layout.simple_spinner_dropdown_item, sessions);
spinnerSession.setAdapter(adapter);

SharedPreferences sharedPreferences =
getSharedPreferences("MyPrefs", MODE_PRIVATE);
SharedPreferences.Editor editor =
sharedPreferences.edit();

Button button1 = findViewById(R.id.button1);
Button button2 = findViewById(R.id.button2);
EditText Visitor = findViewById(R.id.Visitor2);
EditText NoPhone = findViewById(R.id.NoPhone2);
Spinner TicketType = findViewById(R.id.TicketType);
RadioButton Morning = findViewById(R.id.Morning);
RadioButton Evening = findViewById(R.id.Evening);
CheckBox MealPackage = findViewById(R.id.MealPackage);

TextView Display = findViewById(R.id.Display);

```

```

        button1.setOnClickListener(new View.OnClickListener()
        {

            @Override
            public void onClick(View v) {
                String s_Visitor =
Visitor.getText().toString();
                String s_NoPhone =
NoPhone.getText().toString();
                String spinner =
TicketType.getSelectedItem().toString();

                if (Morning.isChecked()) {
                    time = "Morning";
                } else if (Evening.isChecked()) {
                    time = "Evening";
                }

                if (MealPackage.isChecked()) {
                    meal = "YES";
                } else {
                    meal = "NO";
                }

                editor.putString("Visitor", s_Visitor);
                editor.putString("NoPhone", s_NoPhone);
                editor.putString("TicketType", spinner);
                editor.putString("VisitTime", time);
                editor.putString("AddOn", meal);
                editor.apply();

                Toast.makeText(MainActivity.this, "DATA DAH
DISMPAN", Toast.LENGTH_SHORT).show();
                Visitor.setText("");
            }
        }
    }
}

```

```

        NoPhone.setText("");
        TicketType.setSelection(0);
        Morning.setChecked(false);
        Evening.setChecked(false);
        MealPackage.setChecked(false);
    }
});

button2.setOnClickListener(new View.OnClickListener()
{
    @Override
    public void onClick(View v) {
        String s_Visitor =
sharedPreferences.getString("Visitor", "");
        String s_NoPhone =
sharedPreferences.getString("NoPhone", "");
        String spinner =
sharedPreferences.getString("TicketType", "");
        String time =
sharedPreferences.getString("VisitTime", "");
        String meal =
sharedPreferences.getString("AddOn", "");
        Visitor.setText(s_Visitor);
        NoPhone.setText(s_NoPhone);

TicketType.setSelection(adapter.getPosition(spinner));

        Display.setText(
            "VISITOR NAME : " + s_Visitor + "\n" +
"PHONE NO : " + s_NoPhone + "\n" + "TICKET TYPE : " + spinner
+ "\n"
            + "VISIT TIME : " + time +
"\n"
            + "ADD-ON : " + meal

```

```
        );  
    }  
    });  
}
```

## OUTPUT

## **CONCLUSION**

In conclusion, this project successfully demonstrates the development of a simple Android application using Java in Android Studio. The application allows users to enter visitor details, select a ticket type, choose a visit time, and select an additional meal package. The use of SharedPreferences allows the entered data to be stored and retrieved easily.

Through this project, the basic functions of Android development such as EditText, Spinner, RadioButton, CheckBox, Button, TextView, Toast, and SharedPreferences were successfully implemented. This project also provides a better understanding of how user input can be managed and displayed in an Android application.
